EDUCATION	UNIVERSITY OF MICHIGAN Bachelor of Science in Engineering, Computer Engineering, May 2028 • Cumulative GPA: 3.7/4.0 University Honors	Ann Arbor, MI
EXPERIENCE	ST. LOUIS UNIVERSITY DEPARTMENT OF COMPUTER SCIENCE Machine Learning Researcher – Jie Hou Lab • Integrated code into GraphaRNA, a PyTorch GNN built for predicting RNA 3D structures • Stabilized and reproduced training and evaluation on an HPC GPU node by configuring Conda and cuDNN paths, resolving dependency conflicts and verifying stable runtime performance • Executed and monitored model training on ~3,500 RNA sequences over ~800 timesteps, validating loss convergence and checkpoint stability, and training stability across runs • Migrated model pipeline from small-sequence motifs to full-sequence and stem/hairpin templates, improving system efficiency and generating complete RNA 3D structures • Extended dataset loader to read full and template PDBs and return aligned tensors with consistent residue and atom indexing, ensuring data consistency at system level	St. Louis, MO May 2025 - Oct. 2025
	MICHIGAN MARS ROVER TEAM Embedded Systems Engineer • Redesign rover's motor control system to enable direct communication between NVIDIA Jetson and Dynamixel servos for lower latency and simplified subsystem integration • Develop UART-based C++ wrapper around Dynamixel SDK to support direct motor control from Jetson and bridge to existing ROS 2 control nodes and interfaces • Rework mast gimbal hardware bridge to unify servo control with real-time telemetry while debugging serial communication and protocol issues for reliable hardware feedback	Ann Arbor, MI Sept. 2025 - Present
	ATOMBOT RESEARCH TEAM Embedded Firmware Researcher • Implement robotic firmware for the Helium subteam focused on wheel-legged robotics • Engineer interface functions to construct, transmit, and parse custom CAN frames for robotic motor control, including command messages, state queries, and fault-code retrieval • Bench-test and validate CAN communication with MIT ODrive motor controllers, debug message IDs, payload structure, and bus timing to reliably actuate brushless motors	Ann Arbor, MI Jan. 2026 - Present
	ROOKI LLC Founding Engineer • Develop frontend and backend of a consumer sports digital platform focused on delivering fast, personalized sports digest with engaging gamification, and user-specific content • Implement ~40–50% of production codebase, owning core features while previously leading 3-engineer delivery team and coordinating weekly feature iterations • Support 40+ early-access users and lead major product transitions, including shifting platform from single-sport focus on hockey to informational multi-sport daily recap	Ann Arbor, MI Sept. 2025 - Present
	MICHIGAN HACKERS CLUB Advanced Web Development Engineer • Collaborated with fellow students to develop internship tracker using React/Typescript • Built reusable components (buttons, cards, inputs, labels) and implemented login/signup authentication pages, optimized for scalability and maintainability • Coded leaderboard page, connecting to Supabase to dynamically display total users, application counts, and success/rejection/pending rates for each user	Ann Arbor, MI Sept. 2024 - Present
SKILLS	• Coursework: Data Structures and Algorithms, Computer Organization, Logic Design • Languages: Python, C, C++, MATLAB • Frameworks & Tools: Git, Linux, ROS 2, PyTorch, TensorFlow, CUDA	
INTERESTS	• Involvement: Michigan Geoguessr Club, IM Soccer, Volunteer at Maize and Blue • Avid Traveler: Scuba dived in Oahu, Biked the Shimanami Kaido, Traversed Carcassonne • Work: Server at Hi-Pointe Drive-In, Camp Counselor at The Wilson School Think Camp
